

M·CUBE

M-CUBE

Understated and tiny in proportion, the new M-cube is a revolutionary 5.1 home theatre system for the discerning listener who desires sound quality and discrete style in equal combination.

Just 9cm in size, the satellites can be wall or stand mounted, and due to their use of radical new DML (Distributed Mode Loudspeaker) technology, they can be placed at different distances and angles from the listener – wherever is convenient – without disrupting their spectacular performance.

The rich and spacious sounds belies the size of the satellites and makes watching movies and listening to music an irresistible pleasure. A powerful 250 watt amplified subwoofer is included in the package – no lightweight when it comes to delivering power, but as precise and articulate as any with quality stereo music.

M-cube is simple to set-up and install and is supplied with all the necessary cables, fully adjustable wall brackets and a selection of alternative 'skins' to customise the look to your taste.

“no lightweight when it comes to delivering power”
